

Release Notes

These Release Notes outline changes made to Panviva (version **18.6**) that may directly affect users.

New Features

Export Full data for Inactive Users Analytics Report (18998)

Users can now Export Full Data for the Inactive Users Analytics chart to get a list of all Users who did not access Panviva application from the time period selected to date.

Please Note: Any Users that were deprecated during the time period selected to run Analytics chart or to Export Full data will not be included in the Inactive User Report.

Additionally, it is recommended to run the report for a maximum of a three-month period.

Fixes

Updating a Welcome page in original language does not update Welcome page in all languages (20653)

When a Welcome page is updated in Original language, it causes Welcome page sync issues in all other interface languages. Because of which, navigating via a different User Interface after a Welcome page update in Original

language generated error while fetching Welcome page. This has been fixed.

Welcome pages were not rendering when cached (20736)

Enabling Caching of Welcome pages resulted in Welcome page not rendering at all. To display Welcome pages, caching had to be disabled. This has been fixed and Welcome page caching is re-enabled.

Searching for a document with Custom property filter fetched incorrect results (20666)

When Searching for a document with a custom property filter, the search generated incorrect results. This has been fixed.

If this is you, and you love what we're doing, or you have some product feedback, please let us know at support@panviva.com
