

## Release Notes

These Release Notes outline changes made to Panviva (version **18.08**) that may directly affect users.

### New Features

Warning message to be displayed to the Author when opening a document set to 'Future Release' (18923)

When an Author attempts to open a document with a set 'future release' date, the Author will see a 'Warning Message' suggesting that the document has a future date assigned to it. This is to prevent the Author from accidentally editing a document that is set for a release.

### Improvements

Retain Deleted Author names on document (19005)

Currently, if an Author is deleted from the system, it deletes all records of the Author from the application. This means that in case an Author is deleted, the Author field for the document that has been authored by that Author displays blank.

#### *Improvement*

When an Author gets deleted from the system, the Author column will display 'Deleted User' along with an additional column displaying the Full name of the Author that was deleted. This is to ensure transparency and to track any changes made to the document.

Transport Layer Security (TLS) upgrade from 1.1 to 1.2 (20923)

We have upgraded the TLS which ensures a more secure and stable data transfer. This is to ensure data coming from user to the back-end system remains safely encrypted.

Inactive Users Analytics chart performance improvement (20704)

We have made some backend performance improvements with the Inactive Users Analytics chart as well as its export full data. This means issues such as slowness of system and potential errors associated with running Inactive Users Analytics chart will improve massively reducing load on system and potential timeouts.

Last Access date for Inactive Users Analytics Report (20840)

For any Inactive User Analytics Report, the report will now display the date for when the Panviva application was last accessed by the Inactive User. The 'last Accessed date' will be displayed on exporting the chart.

*Please note: If the User account was deleted from the application, the 'Last Accessed date' will display a blank cell for that User.*

Spell check **ON** by default for all browsers (19844)

Spell check is now turned **ON** by default for all the supported browsers.

## Fixes

Unwanted characters showing up in the interrupt message in the Viewer (18468)

When displaying interrupts in the viewer, unwanted characters would be displayed before and after the document name. This has been fixed.

Receiving Review and/or Approve Alert for document even after the action has been completed (20102)

Users were facing issues where they were receiving notification emails to review and/or approve a document even after that action was completed. This has been fixed.

Inconsistencies with the notification count across browsers and desktop (20391, 20639)

Some users were experiencing inconsistencies with the count of message centre notifications across browsers and desktop, where the top right-hand corner of the viewer report displayed one number yet upon going into the notification it displayed another. This error has been fixed.
