

Release Notes

These Release Notes outline changes made to Panviva (version **19.06**) that may directly affect users.

Features

Notifications for Document Owner upon feedback creation*

Users that are added to 'Document Owner' Permissions in the Document Management view can now be notified upon feedback creation. Notifications for feedback will be received in the message centre.

Please note: Existing users that have 'roles' added to 'Document Owner' permissions will not receive the notifications for feedback. The users must be explicitly entered as Document Owners.

Assigning feedback to another Feedback admin (7933)*

Authors and feedback admins can assign or re-assign feedback to another Feedback admin in the Feedback Management window.

For feedback admin to be displayed in assignee list, the feedback admin 'role' or 'user' must be explicitly added to 'Read' permissions in 'Document Management' view.

This feature will be beneficial for users requiring a hierarchy of admins who manage feedback submissions.

Please note: For this feature to be available, ensure 'Feedback Admin' feature is turned on.

These features are only available if the **Collaboration Hub (Advanced Feedback) feature has been enabled.*

Fixes

Error while updating a workflow (6711)

Users reported an error while modifying an existing workflow, where the name would revert to the old workflow name. This is fixed.

Document links stops working when using SSO authentication (3693)

Users accessing document link when using SSO authentication for login were directed to the welcome page instead of the desired document. This has now been fixed.

2006 Error for Manual Workflow (4407)

Improvements have been made to the way the system processes manual workflows. Users are unlikely to experience an error while trying to view a workflow.

Document Access Details Analytics Report - Export Full Data Issue (8225)

System stability issues with the Export Full Data for the Document Access Details analytics report when large amount of data is required to be exported is resolved. Measures have been put in place to queue up full data export requests so that multiple requests don't overload the system. This may contribute to longer background task processing times for large reports or during peak periods. This is to ensure stable system performance. The 10,000 record limit for full data export has been removed by this improvement.

Please note that during periods of longer processing times, the export will complete in due course. **Repeating the full data export is not advised and may extend processing time.**

If this is you, and you love what we're doing,
or you have some product feedback, please
